Indore, India | jainashi2005@gmail.com | +91 8269665428 | LinkedIn | GitHub | LeetCode

Summary

Final-year B.Tech CSE (AI/ML) student with a strong foundation in Python, SQL, machine learning, and generative AI, with hands-on experience building AI applications, validating data accuracy, and solving real-world problems through code.

Technical Skills

- **Programming Languages:** Python, C++, Java, SQL
- **AI/ML:** Machine Learning, Scikit-learn, Pandas, NumPy, Matplotlib, Seaborn, OpenCV, Computer Vision
- **LLM / GenAI Tools (project-level):** RAG, LangChain, Google Gemini, ChromaDB, Streamlit
- **Software & CS Fundamentals:** Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks
- **Tools & Cloud:** Git/GitHub, AWS (foundational), Power BI, Excel

Education

VIT Bhopal University 2023 – 2027

B.Tech, Computer Science (AI/ML) – CGPA: 8.46/10.0

Senior Secondary (XII), Madhya Pradesh Board 2022 – 2023

Percentage: 88.4%

Secondary (X), CBSE 2020 – 2021

Percentage: 91.2%

Experience

Data Analyst Intern Jun 2026 – Jul 2026

Tech Rudraum Pvt. Ltd., Indore

- Analyzed product return patterns across state, distributor, and outlet dimensions by designing and building an interactive Power BI dashboard using DAX measures and Power Query transformations.
- Cleaned, structured, and validated large raw sales datasets to ensure consistency and accuracy, then engineered calculated measures (return %, total returns, state-wise contribution) to enable reliable trend analysis.
- Designed dynamic visual reports, filters, and slicers to identify high-return regions, delivering insights that supported ongoing, data-driven business decision-making.
- Validated data quality and accuracy at each transformation step, cross-checking calculated measures against source data to ensure reliable, error-free reporting for business stakeholders

Cloud Application Developer Intern Apr 2025 – Jun 2025

IntMavens Infotech Pvt. Ltd. – Technical Training Program

- Completed a structured technical training program covering core cloud computing concepts – service models (IaaS/PaaS/SaaS), deployment models, cloud storage, networking, and security – with exposure to AWS, Azure, and GCP.
- Applied data analytics and visualization techniques using Power BI (DAX, Power Query) as the primary hands-on component, building dashboards and reports on practice datasets.
- Strengthened foundational understanding of cloud architecture and data workflows through guided coursework, case studies, and applied exercises.

Projects

KnowledgeGPT: RAG Chatbot with Conversational Memory | Python, LangChain, Google Gemini, ChromaDB, Streamlit GitHub

- Built a Retrieval-Augmented Generation (RAG) chatbot that ingests and answers questions from user-uploaded PDFs, text files, and webpage URLs, using ChromaDB for vector storage and similarity search to retrieve relevant context.
- Integrated LangChain conversational memory with Google Gemini to enable context-aware, multi-turn follow-up question answering, wrapped in an interactive Streamlit web interface.

Superstore Sales Analysis and ML Forecasting | Python, Pandas, Scikit-learn, Power BI GitHub

- Performed end-to-end exploratory data analysis on 9,800+ transaction records (18 features) using Pandas, Matplotlib, and Seaborn to uncover regional and category-wise sales patterns.
- Built and compared ML forecasting models (Linear Regression vs. Random Forest); applied IQR-based outlier removal, improving Random Forest MAE from 266 to 67 and boosting R^2 by $3\times$, then visualized results in an interactive Power BI dashboard.
- Documented model evaluation methodology and key findings, comparing trade-offs between model accuracy and interpretability to guide forecasting recommendations

AttendAI: Real-Time Facial Recognition Attendance System | Python, OpenCV, SQLite, pyttsx3 GitHub

- Engineered a contactless attendance system using OpenCV and the face-recognition library to detect and match live webcam faces against stored encodings in real time.
- Built manual and bulk face-registration pipelines, storing user data and attendance logs in a SQLite database with automatic voice feedback via pyttsx3 on successful recognition.
- Automated daily attendance reporting by generating CSV exports and Word-format summary reports for record-keeping.

Certifications

- IT Support Certificate – Google
- Internet of Things – NPTEL
- Cloud Computing – NPTEL
- Applied Machine Learning in Python – Coursera
